

THEMATIC GROWTH RESEARCH

Equity Research

Structured thematic equity research — rubric, valuation models, and adversarial review, packaged for offline reading.

Report generated: 12 May 2026

Contents

1. Equity Research
2. Executive summary
3. Discover — goals and theme weights
4. Industry trends — macro & sleeves
5. Screen & shortlist
6. Decide — model reconciliation
7. Personal holdings (in Decide)
8. Appendix — methodology
9. Appendix B — Company research (PDF; one page per name)

Digital PDF: use bookmarks or tap a line above. Interactive HTML keeps filters and live charts.

Equity Research

Structured thematic equity research — rubric, valuation models, and adversarial review. Same scope as the PDF cover: from universe screen through valuation and decide.

What this pack covers. The dashboard scores a growth-oriented universe on a consistent rubric, runs multiple valuation models, stress-tests each thesis, and surfaces names for deeper work. Sections follow one pipeline: **Discover** (goals and weights), **Screen** (universe and shortlist), **Decide** (models + historic risk in one table), then **Stock deep dive** in the live HTML (charts and full narrative). The PDF adds **Appendix B** — one research page per name (charts, watchlist, triggers — screen-only in the PDF export).

How names are scored. Each company is scored 1–5 on six dimensions — growth, margins, balance sheet, durability, tail risks (higher is worse), and valuation (higher means cheaper). Scores combine into a composite out of 30 with equal weights and transparent qualitative criteria — no hidden weighting or black-box scoring.

Evidence and models. Fundamentals and history come primarily from **yfinance** (verify material numbers in **SEC filings** and company releases). Valuation layers include forward-multiple scenarios, DCF sensitivity grids, historical risk metrics, and Monte Carlo paths. The live HTML adds filters, sorting, **TradingView** charts, and directional social inputs from Reddit and X — not trading signals. AI assists theme research, earnings cross-checks, adversarial review, and sentiment scanning; every buy/sell/hold decision stays with you.

Using this PDF vs. the dashboard. The export is an offline reading pack (conclusions, evidence, model outputs). Expandable sections are inlined for print — layout is tuned for paper, not pixel-perfect parity with the screen. Treat cross-model disagreement as a **filings and guidance checklist**, not noise.

Report generated **12 May 2026**. Underlying figures as of **2026-05-11 UTC** unless noted in-body. This material is **education and research**, not personalised investment advice. yfinance fields can be delayed or mis-mapped; verify in filings before acting.

Disclaimer: No recommendation to buy or sell. No guarantee of returns. UK and other readers must confirm broker, ISA or SIPP eligibility, and tax treatment before trading.

Executive Summary

This report's **55-name** core shortlist (as of **2026-05-28**) is drawn from a **489-company** thematic universe. **7** names sit in Tier 1 (top composite-rank quartile within this shortlist: MU, B, FSLR, PSX, MPC, VLO (+1 more)). Selection follows the five-signal composite—scenario, rubric, risk, Monte Carlo, and DCF—with theme caps; conviction tiers use that composite rank, not the rubric scorecard alone.

Versus the prior snapshot: **4 added** (CI, NDX1.DE, REGN, WDAY), **4 dropped** (CNC, QRVO, TENB, VST), **21 unchanged**. Sleeve emphasis: Quantum / frontier compute (20), AI infra & compute (13), Energy transition & grids (8).

Bottom line: Before overriding the composite screen, check theme-cap casualties and high-growth names still outside the pool — then confirm each hold in filings and adversarial packs (a gate, not a buy signal).

As of **2026-05-28** · **55-name** core shortlist · **489** universe · **7** themes · **~355** modelled

Five-signal composite: pool = top 60 by weighted percentile blend (scenario, rubric, risk, Monte Carlo, DCF from universe_composite_rank.csv; weights in shortlist_weights.json), then rubric total and US>EU>London tie-break. Theme caps fill to ≥20, then expand to ≤28 while valu...

Shortlist by conviction tier

Grouped by composite-rank quartile within the core shortlist (five-signal blend).

Tier	#	Names
Tier 1 — Highest conviction	7	MU, B, FSLR, PSX, MPC, VLO, CVS
Tier 2 — Strong composite	36	PFE, CI, EOG, GEN, PATH, REGN, ASTS, AVGO, AVIO.MI, BKSJ (+26 more)
Tier 3 — Core watchlist	6	SMCI, ZBH, WDAY, VWS.CO, TXT, NDX1.DE
Tier 4 — Lower composite (theme / seat)	6	NVDA, CRUS, TSM, DIOD, PLAB, QUBT

- **MU** — composite rank #1 · scorecard 20/24 · wt upside +252%. High-bandwidth memory and DRAM for AI servers · Revenue up 196% year-on...
- **B** — composite rank #2 · scorecard 19/24 · wt upside +253%. Barrick Mining — gold and copper producer (NYSE: B) · Revenue up 67% ye...
- **FSLR** — composite rank #3 · scorecard 18/24 · wt upside +167%. Utility-scale thin-film solar modules · Revenue up 24% year-on-year · G...

Supporting view and watchouts

Why this shortlist

- Revenue momentum on the shortlist: **QUBT** (+9364% YoY) · **ASTS** (+1952% YoY) · **IONQ** (+755% YoY).
- Sleeve mix on the 55-name shortlist: Quantum / frontier compute (20), AI infra & compute (13), Energy transition & grids (8), Industrial automation & robotics (6), Health Tech (4).
- Universe screen: **489** companies across **7** themes on US, UK, and European listings — rubric scored on latest quarterly earnings.
- Selection uses the five-signal composite with theme caps — rubric rank alone does not add or drop names.
- Tier 1 = top quartile on five-signal composite rank within this shortlist (not rubric ≥ 18).

Biggest risks

- Tier 4 (lowest composite quartile on this shortlist): **CRUS, DIOD, NVDA, PLAB, QUBT, TSM** — may include theme-seat or cap-driven names; confirm thesis in filings.
- Elevated drawdown in the lookback window: **ASTS, AVIO.MI, BKSJ, CRUS, DIOD** — volatility is not thesis validation.
- Quantum sleeve names remain narrative-heavy with extreme valuation risk — treat as long-dated optionality, not core compounders.
- Key kill triggers in focus: **ASTS**: Two consecutive quarters of cash burn acceleration without funded runway through 2027 · Material gui; **AVGO**: Material guidance cut vs consensus on revenue or margins; **AVIO.MI**: Two consecutive quarters of cash burn acceleration without funded runway through 2027 · Material gui.

Discover

Investor goals, risk appetite, and the investment universe

You are building a growth portfolio across 7 structural themes, spanning US, UK, and European markets. Each theme gets a **policy target weight** (see `theme_target_weights.json`) used for Decide **theme caps** and the Shortlist **~Alloc %** column — so the research queue tracks the same sleeve mix, renormalised across names that actually clear the bar. The approach is to drip-buy gradually — many small positions over time rather than deploying all at once. The universe includes NYSE, NASDAQ, London Stock Exchange, Euronext, and Xetra-listed names — all accessible to UK-based investors through major brokers. The table below shows policy weights; empty sleeves on Decide are called out under the Shortlist table after each refresh.

Target theme weights

Theme	In simple words	Target %
AI infrastructure & compute	Chips, servers, data centres, and gear that run AI	27%
Energy transition & grids	Power, grids, and equipment as electricity demand grows	26%
Health Tech	Tech-driven healthcare: robotic surgery, AI diagnostics, biotech pipelines	14%
Industrial automation & robotics	Factories and robots doing more of the work	11%
Cybersecurity & digital trust	Blocking hacks and keeping data and systems safe	9%
Fintech & digital money	Payments, neobanks, exchanges, and financial infrastructure software	8%
Quantum / frontier compute	Very early "next" computers—not yet a big business for most names	5%
Total		100%

Universe coverage: 489 companies across 7 themes on US, UK, and European exchanges, screened for direct thematic linkage to the demand driver — not just "AI" in the pitch deck. The manifest was enlarged so the rubric grid covers the same broad sleeve you screen before cutting to Decide.

Shortlist bar: Treat the Decide shortlist as provisional. If it still carries Tier 3 names or Tier 2 names at the softer end of the models, keep re-screening the **full 7-theme universe** (sort, stress-test, adversarial pass) until you surface a tighter set of tickers that clears the same evidence bar — do not treat the shortlist as finished just because it fits on one page.

Industry Trends

The macro, sector, and thematic forces shaping where opportunities exist

Three forces drive every theme below: the AI capital expenditure cycle pulling demand for chips, power, and security; grid modernisation and electrification reshaping energy markets; and regulatory tailwinds (IRA, CHIPS Act, NIST cybersecurity frameworks) creating policy floors under spending. Each theme card explains the demand drivers, where value accrues, and common mistakes to avoid.

Industry & macro narrative

Theme	Thesis in one breath	Where value tends to accrue	Common mistake
AI infra (30%)	Training, inference, and enterprise copilots need accelerators, HBM, networking, cooling, and power inside hyperscale data centres; cloud capex is the demand flywheel.	GPUs/accelerators, memory, EDA, WFE (deposition/etch/metrology), DC networking, thermal/power subsystems — each layer has different cyclicalty and customer concentration.	Labelling any software “AI” without revenue tied to physical or design infrastructure that enables compute.
Energy & grids (28%)	AI load plus electrification raises baseload and peak needs; regulated wires, merchant IPPs, renewables, and grid hardware all play different roles in the same macro story.	Allowed ROE utilities, contracted PPAs, grid equipment backlogs, select solar/midstream — map who earns regulated vs merchant vs manufacturing margin.	Equating long-run load growth with next-quarter power prices (weather, gas, policy noise).
Cyber (10%)	More cloud + AI surface area raises breach risk; boards standardise on platforms, identity, and OT protection — renewals and module attach drive durable spend.	Consolidating platforms, network appliances with installed base, SASE/identity specialists — compare net retention and module cross-sell, not logo counts.	Treating all “cyber” as one factor; growth and retention dispersion across peers is wide.
Industrial auto (12%)	Labour shortages, reshoring, and precision requirements push capex into robots, motion, sensors, and industrial software — but cycles bite when factories pause spend.	Factory automation vendors, power management for plants and DCs, integrators with recurring service — check backlog quality vs one-off equipment.	Confusing strong order headlines with durable profit when customers can cancel or defer capex quickly.
Health Tech (15%)	Technology shifts outcomes (GLP-1, robotics, devices, targeted oncology); payers and patent clocks determine economics as much as clinical efficacy.	Transformative franchises with runway, robotic platforms with consumables, select devices — diligence payer coverage and patent cliffs.	Ignoring who pays; great science can still fail commercially if reimbursement tightens.
Fintech & digital money (8%)	Payments rails, neobanks, exchanges, and financial market infrastructure — revenue tied to moving money, underwriting, or selling software to banks and merchants.	Scaled payment networks and processors; neobanks with improving unit economics; exchanges, clearing, and market-data vendors with subscription or volume mix.	Labelling any consumer app with a wallet as fintech without checking whether payments are material to revenue and margin.
Quantum (5%)	Early-stage hardware, cryogenics, and cloud access bets; useful commercial advantage vs classical compute is still uneven; dilution and milestone risk dominate.	Hardware paths, control electronics, enterprise hybrids (e.g. IBM) — read cash runway and revenue quality in filings.	Confusing lab milestones with near-term per-share cash flows.
Space & defence	Cross-cutting sleeve: launch cadence, satellite services, defence primes — long programmes, political risk, dilution for growth-stage space.	Backlog visibility, services mix, execution on programmes vs hardware one-offs.	Ignoring dilution and programme slips while focusing only on headline contract wins.

Screen & Shortlist

What is this? A scorecard to compare companies side by side on the same six dimensions. Click any score column to sort highest-to-lowest (click again to reverse). Not a formula — just a structured way to keep your analysis consistent. **Shortlist optimisation:** whenever the Decide pack still shows Tier 3 or marginal Tier 2 names, treat the universe table below as an open search — keep sorting across *all* themes until you find tickers that beat the incumbents on the same rubric and model evidence, then refresh the shortlist.

PDF rubric (shortlist only): Dimension definitions are in Screen & Shortlist → “How companies were selected”. Shading: Growth–Valuation = 1–5 (greener = stronger); Tail inverted (greener = lower risk). Total = tiered bands. One-line notes: green = strong YoY signal, red = clear decline language, grey = mixed/neutral.

Shortlist rubric: Only the Decide shortlist (25 names) — same set developed in Research and Value. Full universe stays in the HTML dashboard.

Shortlist

Which names advance from screening to detailed analysis, based on rubric scores, theme linkage, and balance of growth vs risk. This is a work queue — not a basket, not position sizes, and not a recommendation to trade.

Shortlist changes (this refresh)

Shortlist = top ~60 by **five-signal composite** (scenario, rubric, risk, Monte Carlo, DCF percentiles; see shortlist_weights.json where composite mode applies), then **theme caps** to 20–28 names. **Rubric alone does not decide adds or drops.**

Changes since 2026-05-17

Added

Ticker	Theme	Composite #	Scen %	Rub %	Risk %	MC %	DCF %	Rubric	Why
CI	health	9	97.64	97.31	16.50	97.98	97.64	18	Composite pool + theme cap
NDX1.DE	energy	25	67.34	82.49	84.85	67.68	67.34	16	Composite pool + theme cap
REGN	health	13	91.25	85.52	34.68	96.63	91.58	16	Composite pool + theme cap
WDAY	cyber	16	95.29	98.32	2.69	99.33	95.29	18	Composite pool + theme cap

Dropped

Ticker	Reason	Composite #	Rubric	Note
CNC	Theme bucket full	22	17	health cap (max 4): slots held by CVS, PFE, CI, REGN.
QRVO	Outside top composite pool	67	13	Composite rank #67 — outside top ~60 pool this refresh.
TENB	Theme bucket full	17	17	cyber cap (max 3): slots held by GEN, PATH, WDAY.
VST	In pool but lost after cap ranking	31	18	In composite pool but did not make the cap-constrained shortlist.

Not advice. ~Alloc % splits each theme's policy weight across Decide names in that sleeve (renormalised to 100% for the names on the list). Anything here needs your own filings pass, ISA/SIPP eligibility at your broker, and a full adversarial pack before real money.

Full thesis, market context, and kill criteria for each name are in Monitor (select ticker or use Deep dive links in the table).

Method: Names with stronger balance-sheet and durability scores relative to tail-risk exposure are prioritised. Quantum names remain "theme only" until a full adversarial review is complete. Research time is allocated in proportion to theme weights — more depth on AI and energy than quantum.

Ticker	Company	Theme	Tier	~Alloc %	Deep dive

Action items

1. Align any handwritten tiers or exec-summary bullets with the latest matrix rows.
2. When valuation assumptions change materially, re-run the full pipeline before trusting scenario/Monte Carlo columns.

Appendix: AI Architecture and Data Sources

What powers this platform, where the data comes from, and how to reproduce the analysis

Data sources

yfinance (Python)

Fundamentals: price, market cap, P/E ratios, EPS, revenue, margins, cash flow, analyst targets. Historical price data for risk metrics and Monte Carlo inputs. Free, no API key required. Can be delayed or incorrect — always verify against filings.

TradingView (embedded widget)

Live candlestick charts for visual price action and timing assessment. Loaded client-side via TradingView's public widget API. Requires internet connection.

Reddit and X (directional only)

Finnhub free-tier context: analyst recommendation mix, insider MSPR, recent headline count, earnings timing. Not retail social sentiment.

SEC filings (manual reference)

10-K and 10-Q filings for earnings verification, risk factors, segment breakdowns, and management commentary. Not automatically pulled — used to cross-check yfinance data.

Screening methodology

Every company is scored 1–5 on six dimensions: **growth** (revenue trajectory), **margins** (gross and operating margin quality), **balance sheet** (debt vs cash), **durability** (competitive moat strength), **tail risks** (low-probability high-impact threats — higher is worse), and **valuation** (price relative to fundamentals — higher means cheaper). Scores are equal-weighted into a composite total out of 30. The rubric is qualitative and transparent — no hidden weighting or black-box scoring.

Valuation models

Forward-multiple scenario analysis

Takes current earnings, grows them at three rates (bull / base / bear) over 3 years, applies exit multiples, and probability-weights the results.

DCF sensitivity

Discounted cash flow grids testing 5 growth rates against 5 WACC assumptions. Each cell shows the implied share price and percentage difference from current market price.

Historical risk metrics

Two years of daily price data: beta (market sensitivity), annualised volatility, maximum drawdown, Sharpe ratio, and S&P 500 correlation.

Monte Carlo simulation

10,000 random price paths using geometric Brownian motion. Outputs probability of 50%+ gain and 30%+ loss over the projection period.

AI workflow

Claude supports each stage of the pipeline:

Theme research: AI identifies demand drivers, supply chain nodes, and overlooked names within each theme.

Earnings analysis: Latest quarterly data pulled via yfinance. AI cross-references against management commentary and flags thesis contradictions.

Adversarial review: AI generates structured bear-case bullets, stress points, and kill criteria for each proposed name.

Sentiment scanning: Directional social signals aggregated from Reddit and X.

Claude Code Skills

The AI-powered stages of this pipeline are driven by four specialised skills:

thematic-equity-research

The core skill. Defines the full research pipeline — company one-pagers, social sentiment scanning, and adversarial thesis review packs. Sets pillar taxonomy, operating principles (order matters, separate growth from valuation, evidence ladder, kill

criteria), communication style rules, and UK-resident execution checklist.

web-scraping

Powers earnings data extraction via yfinance and social sentiment gathering from Reddit and X. Handles anti-bot patterns, content extraction cascades, and graceful degradation when APIs are unavailable.

investment-advisor

General investment analysis patterns applied to rubric scoring, valuation model selection, and portfolio construction logic. Provides frameworks for risk assessment and position sizing — not personalised advice.

mbb-consultant

Structured problem-solving and strategic frameworks (issue trees, MECE breakdowns, hypothesis-driven analysis) applied to thesis construction, industry analysis, and the adversarial review process.

Guardrails

Every page includes a disclaimer: this is education and research, not personalised investment advice.

No name advances to "proposed" status without a completed adversarial review.

All rubric scores require dated, citable evidence — no subjective scoring without data.

Human-in-the-loop: the platform surfaces analysis, but the investor makes every buy/sell/hold decision.

Data freshness: yfinance data can be delayed or incorrect. Always verify critical numbers in SEC filings before acting.

Appendix B — Company research

One page per name (composite shortlist, then personal holdings). Regenerated on refresh.

CRUS — Cirrus Logic, Inc. (composite shortlist)

At a glance. Tier 4 · Rubric 17/24 · Scenario wt +69% · MC median +61% · DCF mid +5%

What this company is. Cirrus Logic, Inc., a fabless semiconductor company, develops mixed-signal processing solutions and audio products in China, the United States, and internationally. The company offers audio products, including amplifiers; codecs components that integrate analog-to-digital converters (ADCs) and digital-to-analog converters (DACs) into a single integrated cir...

QUBT — Quantum Computing Inc. (composite shortlist)

At a glance. Tier 4 · Rubric 14/24 · Scenario wt -93% · MC median -93% · DCF mid -99%

What this company is. Quantum Computing Inc., an integrated photonics company, provides quantum machines to commercial and government markets in the United States. The company develops thin-film lithium niobate chips for optical devices, such as electro-optical modulators, periodically poled devices for frequency conversion, and micro-ring resonator cavities markets. It is also ...

Key products & revenue drivers. Quantum computing micro-cap hardware Quantum computing micro-cap hardware

Strategic plays. Quantum computing micro-cap hardware · Revenue up 9364% year-on-year · Gross margin -20%, operating margin -557% · Our scorecard: 14/24 · Valuation pool rank #282 Quantum computing micro-cap hardware · Strongest on scorecard: growth momentum (5/5) · Revenue up 9364% year-on-year · Our scorecard: 14/24

Theme linkage. This name is mapped to the Quantum / frontier compute sleeve. Commercial quantum revenue remains early and uneven; demand is long-dated optionality. Funding runway and dilution dominate near-term narratives. Quantum computing micro-cap hardware Indicative allocation within sleeve: 0.27%

Demand outlook. Commercial quantum revenue remains early and uneven; demand is long-dated optionality. Funding runway and dilution dominate near-term narratives. Revenue up 9364% year-on-year

Market context. Most analysts lean buy · Insiders bought more than they sold recently · 11 news stories in the past week · Last earnings: 31 Mar 2026 Earnings: last reported 2026-03-31. Headlines below are from Finnhub (last seven days) — verify material news in primary sources.

Growth lens: sentiment only — Quantum computing micro-cap hardware · Price may move on theme beta without proportional revenue. · Latest revenue pace about +9364% YoY — confirm in filings.

Thesis. Quantum computing micro-cap hardware · Strongest on scorecard: growth momentum (5/5) · Revenue up 9364% year-on-year · Our scorecard: 14/24

Should I buy today? Not a buy today unless thesis/risk improves materially.

Kill / watch. Two consecutive quarters of cash burn acceleration without funded runway through 2027 · Material guidance cut vs consensus on revenue or margins · Loss of key government or cloud partner contract disclosed in filings Guidance vs prints · Cash burn and dilution · Growth linkage: sentiment only · Quantum computing micro-cap hardware · Price may move on theme beta without proportional revenue. · Latest revenue pace about +9364% YoY — confirm in filings. · Growth quality flag...

Bull. Quantum computing micro-cap hardware · Early revenue or strategic contracts · Balance-sheet runway

Bear. Commercial revenue for the headline theme remains early or uneven — timing risk [soft] · Second-order customer or capex dependency not fully visible in snapshot [soft] · Second-order customer or capex dependency not full
