

THEMATIC GROWTH RESEARCH

Equity Research

Structured thematic equity research – rubric, valuation models, and adversarial review, packaged for offline reading.

Report generated: 12 May 2026

Contents

1. Equity Research
2. Discover – goals and theme weights
3. Industry trends – macro & sleeves
4. Screen & shortlist
5. Research – adversarial reviews
6. Valuation & risk models
7. Decide – model reconciliation
8. Monitor
9. Appendix
10. Stock deep-dive

Digital PDF: use bookmarks or tap a line above. Interactive HTML keeps filters and live charts.

Equity Research

Structured thematic equity research – rubric, valuation models, and adversarial review. Same scope as the PDF cover: from universe screen through valuation and decide.

What this pack covers. The dashboard scores a growth-oriented universe on a consistent rubric, runs multiple valuation models, stress-tests each thesis, and surfaces names for deeper work. Sections follow one pipeline: **Discover** (goals and weights), **Screen** (universe and shortlist), **Research** (adversarial reviews), **Value** (scenarios, DCF, risk metrics, Monte Carlo), **Decide** (reconciliation), then **Monitor** in the live HTML (charts, watchlist, triggers – screen-only in the PDF export).

How names are scored. Each company is scored 1-5 on six dimensions – growth, margins, balance sheet, durability, tail risks (higher is worse), and valuation (higher means cheaper). Scores combine into a composite out of 30 with equal weights and transparent qualitative criteria – no hidden weighting or black-box scoring.

Evidence and models. Fundamentals and history come primarily from **yfinance** (verify material numbers in **SEC filings** and company releases). Valuation layers include forward-multiple scenarios, DCF sensitivity grids, historical risk metrics, and Monte Carlo paths. The live HTML adds filters, sorting, **TradingView** charts, and directional social inputs from Reddit and X – not trading signals. AI assists theme research, earnings cross-checks, adversarial review, and sentiment scanning; every buy/sell/hold decision stays with you.

Using this PDF vs. the dashboard. The export is an offline reading pack (conclusions, evidence, model outputs). Expandable sections are inlined for print – layout is tuned for paper, not pixel-perfect parity with the screen. Treat cross-model disagreement as a **filings and guidance checklist**, not noise.

Report generated **12 May 2026**. Underlying figures as of **2026-05-11 UTC** unless noted in-body. This material is **education and research**, not personalised investment advice. yfinance fields can be delayed or mis-mapped; verify in filings before acting.

Disclaimer: No recommendation to buy or sell. No guarantee of returns. UK and other readers must confirm broker, ISA or SIPP eligibility, and tax treatment before trading.

Discover

Investor goals, risk appetite, and the investment universe

You are building a growth portfolio across six structural themes, spanning US, UK, and European markets. Each theme gets a **policy target weight** (see `theme_target_weights.json`) used for Decide **theme caps** and the Shortlist **~Alloc %** column – so the research queue tracks the same sleeve mix, renormalised across names that actually clear the bar. The approach is to drip-buy gradually – many small positions over time rather than deploying all at once. The universe includes NYSE, NASDAQ, London Stock Exchange, Euronext, and Xetra-listed names – all accessible to UK-based investors through major brokers. The table below shows policy weights; empty sleeves on Decide are called out under the Shortlist table after each refresh.

Target theme weights

Theme	In simple words	Target %
AI infrastructure & compute	Chips, servers, data centres, and gear that run AI	30%
Energy transition & grids	Power, grids, and equipment as electricity demand grows	28%
Health Tech	Tech-driven healthcare: robotic surgery, AI diagnostics, biotech pipelines	15%
Industrial automation & robotics	Factories and robots doing more of the work	12%
Cybersecurity & digital trust	Blocking hacks and keeping data and systems safe	10%
Quantum / frontier compute	Very early "next" computers—not yet a big business for most names	5%
Total		100%

Universe coverage: 316 companies across 6 themes on US, UK, and European exchanges, screened for direct thematic linkage to the demand driver – not just "AI" in the pitch deck. The manifest was enlarged so the rubric grid covers the same broad sleeve you screen before cutting to Decide.

Shortlist bar: Treat the Decide shortlist as provisional. If it still carries Tier 3 names or Tier 2 names at the softer end of the models, keep re-screening the **full six-theme universe** (sort, stress-test, adversarial pass) until you surface a tighter set of tickers that clears the same evidence bar – do not treat the shortlist as finished just because it fits on one page.

Industry Trends

The macro, sector, and thematic forces shaping where opportunities exist

Three forces drive every theme below: the AI capital expenditure cycle pulling demand for chips, power, and security; grid modernisation and electrification reshaping energy markets; and regulatory tailwinds (IRA, CHIPS Act, NIST cybersecurity frameworks) creating policy floors under spending. Each theme card explains the demand drivers, where value accrues, and common mistakes to avoid.

Industry & macro narrative

Theme	Thesis in one breath	Where value tends to accrue	Common mistake
AI infra (30%)	Training, inference, and enterprise copilots need accelerators, HBM, networking, cooling, and power inside hyperscale data centres; cloud capex is the demand flywheel.	GPUs/accelerators, memory, EDA, WFE (deposition/etch/metrology), DC networking, thermal/power subsystems – each layer has different cyclicalty and customer concentration.	Labelling any software “AI” without revenue tied to physical or design infrastructure that enables compute.
Energy & grids (28%)	AI load plus electrification raises baseload and peak needs; regulated wires, merchant IPPs, renewables, and grid hardware all play different roles in the same macro story.	Allowed ROE utilities, contracted PPAs, grid equipment backlogs, select solar/midstream – map who earns regulated vs merchant vs manufacturing margin.	Equating long-run load growth with next-quarter power prices (weather, gas, policy noise).
Cyber (10%)	More cloud + AI surface area raises breach risk; boards standardise on platforms, identity, and OT protection – renewals and module attach drive durable spend.	Consolidating platforms, network appliances with installed base, SASE/identity specialists – compare net retention and module cross-sell, not logo counts.	Treating all “cyber” as one factor; growth and retention dispersion across peers is wide.
Industrial auto (12%)	Labour shortages, reshoring, and precision requirements push capex into robots, motion, sensors, and industrial software – but cycles bite when factories pause spend.	Factory automation vendors, power management for plants and DCs, integrators with recurring service – check backlog quality vs one-off equipment.	Confusing strong order headlines with durable profit when customers can cancel or defer capex quickly.
Health Tech (15%)	Technology shifts outcomes (GLP-1, robotics, devices, targeted oncology); payers and patent clocks determine economics as much as clinical efficacy.	Transformative franchises with runway, robotic platforms with consumables, select devices – diligence payer coverage and patent cliffs.	Ignoring who pays; great science can still fail commercially if reimbursement tightens.
Fintech & digital money (8%)	Payments rails, neobanks, exchanges, and financial market infrastructure – revenue tied to moving money, underwriting, or selling software to banks and merchants.	Scaled payment networks and processors; neobanks with improving unit economics; exchanges, clearing, and market-data vendors with subscription or volume mix.	Labelling any consumer app with a wallet as fintech without checking whether payments are material to revenue and margin.
Quantum (5%)	Early-stage hardware, cryogenics, and cloud access bets; useful commercial advantage vs classical compute is still uneven; dilution and milestone risk dominate.	Hardware paths, control electronics, enterprise hybrids (e.g. IBM) – read cash runway and revenue quality in filings.	Confusing lab milestones with near-term per-share cash flows.
Space & defence	Cross-cutting sleeve: launch cadence, satellite services, defence primes – long programmes, political risk, dilution for growth-stage space.	Backlog visibility, services mix, execution on programmes vs hardware one-offs.	Ignoring dilution and programme slips while focusing only on headline contract wins.

Screen & Shortlist

What is this? A scorecard to compare companies side by side on the same six dimensions. Click any score column to sort highest-to-lowest (click again to reverse). Not a formula – just a structured way to keep your analysis consistent. **Shortlist optimisation:** whenever the Decide pack still shows Tier 3 or marginal Tier 2 names, treat the universe table below as an open search – keep sorting across *all* themes until you find tickers that beat the incumbents on the same rubric and model evidence, then refresh the shortlist.

PDF rubric (shortlist only): Dimension definitions are in Screen & Shortlist → “How companies were selected”. Shading: Growth-Valuation = 1-5 (greener = stronger); Tail inverted (greener = lower risk). Total = tiered bands. One-line notes: green = strong YoY signal, red = clear decline language, grey = mixed/neutral.

Shortlist rubric: Only the Decide shortlist (26 names) – same set developed in Research and Value. Full universe stays in the HTML dashboard.

Theme	Ticker	Growth	Margins	Balance sheet	Durability	Tail risks	Valuation	Total	One-line note
		1-5 · sales / demand · 5 = durable inflection	1-5 · profit on sales · 5 = structural margin lift	1-5 · debt vs cash · 5 = net cash / low leverage	1-5 · moat · 5 = edge survives competition	1-5 · headwinds · 5 = more tail risk (worse)	1-5 · price vs story · 5 = easier to justify	G+M+B S+D+V–Tail	
AI infra & compute	NVDA	5	5	4	5	3	3	19	AI accelerators and data-centre GPU exposure · Revenue up 73% year-on-year · Gross margin 75%, operating margin 65%
AI infra & compute	AVGO	4	5	4	4	3	3	17	Networking and custom silicon for AI and cloud · Revenue up 29% year-on-year · Gross margin 68%, operating margin 45%
AI infra & compute	MU	5	5	4	3	4	4	17	High-bandwidth memory and DRAM for AI servers · Revenue up 196% year-on-year · Gross margin 74%, operating margin 68%
AI infra & compute	TSM	4	4	4	5	4	3	16	Foundry monopoly on advanced nodes 3nm and 2nm · Revenue up 20% year-on-year
Energy transition & grids	VST	5	3	3	3	4	4	14	Nuclear and gas fleet benefiting from AI-driven power demand · Revenue up 43% year-on-year · Gross margin 43%, operating margin 27%
Cybersecurity & digital trust	GEN	4	3	2	3	3	4	13	Consumer and enterprise security brands rollout · Revenue up 26% year-on-year · Gross margin 78%, operating margin 36%
Cybersecurity & digital trust	CHKP	2	4	4	4	2	4	16	Mature firewall and subscription security – cash generative · Revenue up 5% year-on-year · Gross margin 85%, operating margin 28%
Health Tech	REGN	3	5	4	4	3	4	17	Dupixent franchise Libtayo and obesity pipeline – net cash fortress · Revenue up 19% year-on-year · Gross margin 81%, operating margin 21%
Quantum / frontier compute	IONQ	5	1	4	2	5	1	8	Trapped-ion quantum hardware – largest cash runway in pure-play quantum · Revenue up 429% year-on-year · Gross margin 30%, operating margin -369%
Health Tech	GSK	2	4	3	3	3	4	13	Vaccines HIV franchise and specialty pharma (NYSE ADR) · Revenue up 2% year-on-year · Gross margin 75%, operating margin 30%
Health Tech	GMAB.CO	5	5	4	4	3	3	18	Antibody engineering platform – bispecific and ADC (Copenhagen) · Revenue up 42% year-on-year · Gross margin 92%, operating margin 23%
AI infra & compute	QRVO	3	3	3	3	3	3	12	RF connectivity and defense/aerospace semi exposure · Revenue up 8% year-on-year
Energy transition & grids	MPC	3	3	3	3	3	3	12	Refining and midstream logistics – crack spread exposure · Revenue up 9% year-on-year · Gross margin 6%, operating margin 3%
Energy transition & grids	VLO	3	3	3	3	3	3	12	Independent refiner – renewable diesel projects · Revenue up 7% year-on-year · Gross margin 6%, operating margin 5%
Energy transition & grids	PSX	3	3	3	3	3	3	12	Phillips 66 refining plus midstream CPM · Revenue up 7% year-on-year · Gross margin 9%, operating margin 0%
Energy transition & grids	FANG	2	3	3	3	3	3	11	Permian pure-play – shareholder returns focus · Revenue up 4% year-on-year · Gross margin 38%, operating margin 36%
Energy transition & grids	EOG	3	3	3	3	3	3	12	Premier shale operator – returns over growth · Revenue up 16% year-on-year · Gross margin 66%, operating margin 37%
Energy transition & grids	LNG	4	3	3	3	3	3	13	Cheniere LNG export tolling – long-term contracts · Revenue up 23% year-on-year · Gross margin 72%, operating margin 70%
Cybersecurity & digital trust	PATH	3	3	3	3	3	3	12	RPA plus process mining – enterprise automation · Revenue up 14% year-on-year · Gross margin 85%, operating margin 17%
Industrial automation & robotics	TXT	3	3	3	3	3	3	12	Bell aviation plus industrial and Textron Systems · Revenue up 12% year-on-year · Gross margin 18%, operating margin 6%
Industrial automation & robotics	B	5	3	3	3	3	3	14	Barnes aerospace and automation components · Revenue up 65% year-on-year · Gross margin 55%, operating margin 50%
Industrial automation & robotics	ZBH	3	3	3	3	3	3	12	Zimmer Biomed – robotics knee mix · Revenue up 9% year-on-year · Gross margin 72%, operating margin 19%
Health Tech	CVS	3	3	3	3	3	3	12	Retail pharmacy plus Aetna – reimbursement pressure · Revenue up 6% year-on-year · Gross margin 16%, operating margin 5%

Shortlist

Which names advance from screening to detailed analysis, based on rubric scores, theme linkage, and balance of growth vs risk. This is a work queue – not a basket, not position sizes, and not a recommendation to trade.

Shortlist changes (this refresh)

Shortlist = top ~60 by **five-signal composite** (scenario, rubric, risk, Monte Carlo, DCF percentiles; see `shortlist_weights.json` where composite mode applies), then **theme caps** to 20-28 names. **Rubric alone does not decide adds or drops.**

Changes since 2026-05-15

Added

Ticker	Theme	Composite #	Scen %	Rub %	Risk %	MC %	DCF %	Rubric	Why
IONQ	quantum	279	7.83	2.14	34.52	9.96	6.41	8	Composite pool + theme cap

Dropped

Ticker	Reason	Composite #	Rubric	Note
IBM	Outside top composite pool	91	13	Composite rank #91 – outside top ~60 pool this refresh.

Quality movers

Ticker	Change (this refresh)	On shortlist?
ZBRA	Since the prior snapshot, the main signal changes for this ticker are combined rank score moved by +4.0. It is off the current shortlist this refresh because peer ordering, pool membership, or theme caps shifted—compare to cap_casualties in the selection memo if the name still matters strategically.	No
ZBH	Since the prior snapshot, the main signal changes for this ticker are combined rank score moved by -1.0. It still sits on the Decide shortlist, but the drift argues for re-reading thesis, kill triggers, and scenario tables before changing conviction or size.	Yes
TXT	Since the prior snapshot, the main signal changes for this ticker are combined rank score moved by +1.0. It remains on the shortlist with stronger composite or scorecard signals than last run—treat that as a diligence nudge, not a timing signal by itself.	Yes
PATH	Since the prior snapshot, the main signal changes for this ticker are combined rank score moved by -1.0. It still sits on the Decide	Yes

Not advice. ~Alloc % splits each theme's policy weight across Decide names in that sleeve (renormalised to 100% for the names on the list). Anything here needs your own

filings pass, ISA/SIPP eligibility at your broker, and a full adversarial pack before real money.

Method: Names with stronger balance-sheet and durability scores relative to tail-risk exposure are prioritised. Quantum names remain "theme only" until a full adversarial review is complete. Research time is allocated in proportion to theme weights – more depth on AI and energy than quantum.

No Decide names this run for: Quantum / frontier compute (policy target 5%). See the full universe rubric in Screen & Shortlist for candidates.

Research

Deep-dive analysis on each shortlisted company

For each proposed name, this section pairs primary stress, a thesis and screening snapshot, and kill / exit triggers in one matrix so you can pressure-test the queue before committing capital. Use it with the Qualitative bull / bear table in Value.

Decide shortlist – research & adversarial snapshot

Same 23 names as the Shortlist table and report_core_tickers.txt. Primary stress, screening snapshot, and kill refresh on each full pipeline run (rule-based bullets).

Ticker	Theme	Primary stress	Thesis & screening snapshot	Kill / exit trigger (summary)
AVGO	AI infra & compute	Networking and custom silicon for AI and cloud · On ai infra & compute sleeve	Networking and custom silicon for AI and cloud · Strongest on scorecard: margins (5/5) · Revenue up 29% year-on-year · Our scorecard: 17/24	Elevated tail risk – write down observable kill triggers before sizing · Step away if revenue growth slows two quarters in a row

IONQ	Quantum / frontier compute	Trapped-ion quantum hardware – largest cash runway in pure-play quantum · On quantum / frontier compute sleeve	Trapped-ion quantum hardware – largest cash runway in pure-play quantum · Strongest on scorecard: growth momentum (5/5) · Revenue up 429% year-on-year · Our scorecard: 8/24	Long-dated theme – reassess if customer spending stays muted into 2027 · Tail risk is high on our scorecard – watch governance, concentration, and regulation · Valuation score is low – a de-rating hurts if growth disappoints · Step away if revenue growth slows two quarters in ...

Value

Decide shortlist valuation tables refresh whenever you run a full watchlist refresh (core tickers only).

Valuation methods, key assumptions, and margin of safety

Four complementary models estimate what each name might be worth. No single model is decisive – the value is in agreement or disagreement across approaches. Forward scenarios project earnings growth and exit multiples. DCF sensitivity tests discount rates and growth assumptions. Historical risk metrics show how volatile each name has been. Monte Carlo simulations run 10,000 random paths to estimate probability distributions.

Forward-multiple scenario model

What is this? A quantitative bull / base / bear framework for each proposed name. For every ticker: take today's trailing earnings (or revenue per share for pre-profit names), grow them at three rates over 3 years, apply an exit multiple, and compare the implied price to today's price. The weighted column blends all three scenarios by probability.

Generated 2026-05-11T14:41:51Z. Not predictions – illustrative scenarios to frame your own research. Verify in filings.

How to read this: *CAGR* = compound annual growth rate over 3 years. *Exit* = the P/E (or P/S) multiple you think the market will assign at the end of year 3. *Implied* = the share price those inputs produce. Δ = percentage change from today's price. *Weighted* = probability-blended target across all three scenarios.

Ticker	Price	Metric	Current multiple	Bull			Base			Bear			Weighted

Historical risk metrics

What is this? How each name has behaved historically – volatility, drawdown, and market sensitivity. Past behaviour is not a forecast, but it helps size positions and set expectations.

Generated 2026-05-11T21:04:48Z. Not investment advice.

Field	Meaning (2y window)
Beta	Sensitivity vs S&P 500 over ~2y
Ann. vol	Annualised daily return volatility
Max DD	Peak-to-trough drawdown in window
1Y return	Total return over last 12 months
Sharpe	Risk-adjusted return (excess return / vol)
SPY corr	Correlation with SPY daily returns

DCF sensitivity analysis

What is this? How sensitive is each implied price to your growth and discount rate assumptions? Each grid shows one ticker – find your growth assumption on the left, your discount rate across the top, and read the implied price. Green cells show upside from today's price; red show downside.

Regenerated on refresh. Not predictions – illustrative scenarios to frame your own research. Verify in filings.

Growth rate (rows)

The annual rate you expect earnings or revenue to grow over the projection window. Five rows span pessimistic to optimistic, centred on scenario assumptions.
Higher growth → higher implied price. Pick the row matching your conviction.

WACC (columns)

Weighted average cost of capital – the discount rate applied to future cash flows. Higher WACC lowers implied fair value.
Stress columns to see sensitivity to your risk hurdle.

Cell values

Implied fair value per share and percentage vs spot. Treat as directional – terminal value dominates in most grids.

Monte Carlo distribution

What is this? Instead of three point estimates, simulations draw growth and multiple assumptions from ranges. The result is a distribution – share of outcomes above or below today's price.

Regenerated on refresh. Not investment advice – illustrative simulations only. Verify with primary filings.

Decide

Model reconciliation for the core shortlist

What is this? One view that pulls together rubric, scenarios, Monte Carlo, risk metrics, and DCF grids to prioritise further research. No single column is decisive.

Rows follow the same core shortlist as the Screen section; rebuild whenever you refresh watchlists.

Ticker	Theme	Rubric /30	Scenario model		Monte Carlo			Risk profile		Verdict
			Wtd upside	Wtd price	Median up	P(50%↑)	P(30%↓)	Sharpe	Max DD	
MU	AI infra & compute	17	+341%	\$3,198	+323%	100.0%	0.0%	10.29	-58%	Mid scorecard (17/24) · Scenario-weighted upside ~+341% · MC median +323% · Sharpe 10.3, max drawdown ~-58% · Growth rank #1 in pool · Adversarial review before sizing – not a buy signal.
B	Industrial automation & robotics	14	+252%	\$142.88	+236%	100.0%	0.0%	3.17	-29%	Mid scorecard (14/24) · Scenario-weighted upside ~+252% · MC median +236% · Sharpe 3.2, max drawdown ~-29% · Growth rank #3 in pool · Adversarial review before sizing – not a buy signal.
REGN	Health Tech	17	+140%	\$1,679	+130%	99.8%	0.0%	0.45	-60%	Mid scorecard (17/24) · Scenario-weighted upside ~+140% · MC median +130% · Sharpe 0.5, max drawdown ~-60% · Growth rank #14 in pool · Adversarial review before sizing – not a buy signal.
GSK	Health Tech	13	+228%	\$163.15	+215%	100.0%	0.0%	1.21	-28%	Mid scorecard (13/24) · Scenario-weighted upside ~+228% · MC median +215% · Sharpe 1.2, max drawdown ~-28% · Growth rank #49 in pool · Adversarial review before sizing – not a buy signal.
CVS	Health Tech	12	+172%	\$260.70	+160%	100.0%	0.0%	1.71	-34%	Mid scorecard (12/24) · Scenario-weighted upside ~+172% · MC median +160% · Sharpe 1.7, max drawdown ~-34% · Growth rank #35 in pool · Adversarial review before sizing – not a buy signal.
GMAB.CO	Health Tech	18	+100%	\$3,361	+92%	93.2%	0.0%	0.78	-43%	Strong scorecard (18/24) · Scenario-weighted upside ~+100% · MC median +92% · Sharpe 0.8, max drawdown ~-43% · Growth rank #5 in pool · Adversarial review before sizing – not a buy signal.
CHKP	Cybersecurity & digital trust	16	+187%	\$356.31	+175%	100.0%	0.0%	-1.41	-52%	Mid scorecard (16/24) · Scenario-weighted upside ~+187% · MC median +175% · Sharpe -1.4, max drawdown ~-52% · Growth rank #44 in pool · Adversarial review before sizing – not a buy signal.
MPC	Energy transition & grids	12	+168%	\$684.69	+157%	100.0%	0.0%	1.58	-33%	Mid scorecard (12/24) · Scenario-weighted upside ~+168% · MC median +157% · Sharpe 1.6, max drawdown ~-33% · Growth rank #29 in pool · Adversarial review before sizing – not a buy signal.
PSX	Energy transition & grids	12	+180%	\$492.55	+168%	100.0%	0.0%	1.28	-35%	Mid scorecard (12/24) · Scenario-weighted upside ~+180% · MC median +168% · Sharpe 1.3, max drawdown ~-35% · Growth rank #34 in pool · Adversarial review before sizing – not a buy signal.
EOG	Energy transition & grids	12	+220%	\$449.18	+207%	100.0%	0.0%	0.76	-24%	Mid scorecard (12/24) · Scenario-weighted upside ~+220% · MC median +207% · Sharpe 0.8, max drawdown ~-24% · Growth rank #16 in pool · Adversarial review before sizing – not a buy signal.
VST	Energy transition & grids	14	+152%	\$351.85	+141%	100.0%	0.0%	-0.19	-49%	Mid scorecard (14/24) · Scenario-weighted upside ~+152% · MC median +141% · Sharpe -0.2, max drawdown ~-49% · Growth rank #4 in pool · Adversarial review before sizing – not a buy signal.
GEN	Cybersecurity & digital trust	13	+337%	\$102.54	+320%	100.0%	0.0%	-0.75	-44%	Mid scorecard (13/24) · Scenario-weighted upside ~+337% · MC median +320% · Sharpe -0.8, max drawdown ~-44% · Growth rank #7 in pool · Adversarial review before sizing – not a buy signal.
VLO	Energy transition & grids	12	+132%	\$581.49	+123%	99.5%	0.0%	2.38	-35%	Mid scorecard (12/24) · Scenario-weighted upside ~+132% · MC median +123% · Sharpe 2.4, max drawdown ~-35% · Growth rank #33 in pool · Adversarial review before sizing – not a buy signal.
LNG	Energy transition & grids	13	+148%	\$600.66	+138%	99.9%	0.0%	-0.03	-25%	Mid scorecard (13/24) · Scenario-weighted upside ~+148% · MC median +138% · Sharpe -0.0, max drawdown ~-25% · Growth rank #11 in pool · Adversarial review before sizing – not a buy signal.

Ticker	Theme	Rubric /30	Scenario model		Monte Carlo			Risk profile		Verdict
			Wtd upside	Wtd price	Median up	P(50%↑)	P(30%↓)	Sharpe	Max DD	
TXT	Industrial automation & robotics	12	+156%	\$227.60	+146%	100.0%	0.0%	0.46	-35%	Mid scorecard (12/24) · Scenario-weighted upside ~+156% · MC median +146% · Sharpe 0.5, max drawdown ~-35% · Growth rank #22 in pool · Adversarial review before sizing – not a buy signal.
ZBH	Industrial automation & robotics	12	+235%	\$280.34	+221%	100.0%	0.0%	-0.60	-33%	Mid scorecard (12/24) · Scenario-weighted upside ~+235% · MC median +221% · Sharpe -0.6, max drawdown ~-33% · Growth rank #27 in pool · Adversarial review before sizing – not a buy signal.
IONQ	Quantum / frontier compute	8	-59%	\$21.43	-59%	0.0%	99.2%	0.50	-68%	Weak scorecard (8/24) · Scenario-weighted downside ~59% · MC median -59% · Sharpe 0.5, max drawdown ~-68% · Adversarial review before sizing – not a buy signal.
TSM	AI infra & compute	16	+49%	\$601.41	+42%	36.0%	0.0%	2.57	-37%	Mid scorecard (16/24) · Scenario-weighted upside ~+49% · MC median +42% · Sharpe 2.6, max drawdown ~-37% · Growth rank #12 in pool · Adversarial review before sizing – not a buy signal.
FANG	Energy transition & grids	11	+160%	\$528.82	+149%	100.0%	0.0%	1.21	-42%	Mid scorecard (11/24) · Scenario-weighted upside ~+160% · MC median +149% · Sharpe 1.2, max drawdown ~-42% · Growth rank #45 in pool · Adversarial review before sizing – not a buy signal.
NVDA	AI infra & compute	19	+58%	\$356.28	+51%	52.4%	0.0%	1.29	-37%	Strong scorecard (19/24) · Scenario-weighted upside ~+58% · MC median +51% · Sharpe 1.3, max drawdown ~-37% · Growth rank #2 in pool · Adversarial review before sizing – not a buy signal.
QRVO	AI infra & compute	12	+164%	\$243.83	+153%	100.0%	0.0%	0.28	-61%	Mid scorecard (12/24) · Scenario-weighted upside ~+164% · MC median +153% · Sharpe 0.3, max drawdown ~-61% · Growth rank #30 in pool · Adversarial review before sizing – not a buy signal.
PATH	Cybersecurity & digital trust	12	+173%	\$28.05	+161%	100.0%	0.0%	-0.43	-54%	Mid scorecard (12/24) · Scenario-weighted upside ~+173% · MC median +161% · Sharpe -0.4, max drawdown ~-54% · Growth rank #20 in pool · Adversarial review before sizing – not a buy signal.
AVGO	AI infra & compute	17	+34%	\$570.16	+29%	13.7%	0.0%	1.48	-41%	Mid scorecard (17/24) · Scenario-weighted upside ~+34% · MC median +29% · Sharpe 1.5, max drawdown ~-41% · Growth rank #6 in pool · Adversarial review before sizing – not a buy signal.

Action items

1. Align any handwritten tiers or exec-summary bullets with the latest matrix rows.
2. When valuation assumptions change materially, re-run the full pipeline before trusting scenario/Monte Carlo columns.

Monitor

Ongoing tracking, thesis confirmation, and action triggers

Investment theses need constant testing against new data. This section provides tools for tracking price action, maintaining a watchlist, and defining the specific indicators that confirm or weaken each recommendation.

Chart viewer

Live candlestick charts from TradingView. Pick a ticker to see its price action – useful for spotting entry timing, but never trade on charts alone without the fundamental work above. Requires an internet connection.

Watchlist and disqual log

The output shelf – which names you're tracking, which are "theme only" until proven, and why you might disqualify a candidate.

Watch (illustrative): NVDA, MSFT, LLY, VST for multi-sector coverage and liquidity.

Theme only: IONQ, RCLB until linkage and filings evidence meet your bar.

Disqualified (example reasons): Any OTC name below your liquidity floor; any ticker you cannot hold in your UK ISA at your broker; any thesis without a falsifier list.

Monitoring triggers

Indicators that confirm or weaken the original thesis. Review these quarterly alongside earnings data.

Confirming signals (hold or add)

Revenue beats consensus for 2+ consecutive quarters. Margin expansion continues. Management raises guidance. Order backlog grows. Analyst upgrades with price target increases.

Weakening signals (reduce or reassess)

Revenue misses for 2 consecutive quarters. Guidance cut or withdrawn. Key customer loss announced. Regulatory headwind materialises. Insider selling accelerates beyond vesting schedules.

Exit triggers

Kill criteria from the Research section are met. Cash runway drops below 3 quarters (for pre-profit names). Thesis-breaking event: acquisition, delisting, fraud disclosure, or fundamental business model change.

Appendix: AI Architecture and Data Sources

What powers this platform, where the data comes from, and how to reproduce the analysis

Data sources

yfinance (Python)

Fundamentals: price, market cap, P/E ratios, EPS, revenue, margins, cash flow, analyst targets. Historical price data for risk metrics and Monte Carlo inputs. Free, no API key required. Can be delayed or incorrect – always verify against filings.

TradingView (embedded widget)

Live candlestick charts for visual price action and timing assessment. Loaded client-side via TradingView's public widget API. Requires internet connection.

Reddit and X (directional only)

Finnhub free-tier context: analyst recommendation mix, insider MSPR, recent headline count, earnings timing. Not retail social sentiment.

SEC filings (manual reference)

10-K and 10-Q filings for earnings verification, risk factors, segment breakdowns, and management commentary. Not automatically pulled – used to cross-check yfinance data.

Screening methodology

Every company is scored 1–5 on six dimensions: **growth** (revenue trajectory), **margins** (gross and operating margin quality), **balance sheet** (debt vs cash), **durability** (competitive moat strength), **tail risks** (low-probability high-impact threats – higher is worse), and **valuation** (price relative to fundamentals – higher means cheaper). Scores are equal-weighted into a composite total out of 30. The rubric is qualitative and transparent – no hidden weighting or black-box scoring.

Valuation models

Forward-multiple scenario analysis

Takes current earnings, grows them at three rates (bull / base / bear) over 3 years, applies exit multiples, and probability-weights the results.

DCF sensitivity

Discounted cash flow grids testing 5 growth rates against 5 WACC assumptions. Each cell shows the implied share price and percentage difference from current market price.

Historical risk metrics

Two years of daily price data: beta (market sensitivity), annualised volatility, maximum drawdown, Sharpe ratio, and S&P 500 correlation.

Monte Carlo simulation

10,000 random price paths using geometric Brownian motion. Outputs probability of 50%+ gain and 30%+ loss over the projection period.

AI workflow

Claude supports each stage of the pipeline:

Theme research: AI identifies demand drivers, supply chain nodes, and overlooked names within each theme.

Earnings analysis: Latest quarterly data pulled via yfinance. AI cross-references against management commentary and flags thesis contradictions.

Adversarial review: AI generates structured bear-case bullets, stress points, and kill criteria for each proposed name.

Sentiment scanning: Directional social signals aggregated from Reddit and X.

Claude Code Skills

The AI-powered stages of this pipeline are driven by four specialised skills:

thematic-equity-research

The core skill. Defines the full research pipeline – company one-pagers, social sentiment scanning, and adversarial thesis review packs. Sets pillar taxonomy, operating principles (order matters, separate growth from valuation, evidence ladder, kill criteria), communication style rules, and UK-resident execution checklist.

web-scraping

Powers earnings data extraction via yfinance and social sentiment gathering from Reddit and X. Handles anti-bot patterns, content extraction cascades, and graceful degradation when APIs are unavailable.

investment-advisor

General investment analysis patterns applied to rubric scoring, valuation model selection, and portfolio construction logic. Provides frameworks for risk assessment and position sizing – not personalised advice.

mbb-consultant

Structured problem-solving and strategic frameworks (issue trees, MECE breakdowns, hypothesis-driven analysis) applied to thesis construction, industry analysis, and the adversarial review process.

Guardrails

Every page includes a disclaimer: this is education and research, not personalised investment advice.

No name advances to "proposed" status without a completed adversarial review.

All rubric scores require dated, citable evidence – no subjective scoring without data.

Human-in-the-loop: the platform surfaces analysis, but the investor makes every buy/sell/hold decision.

Data freshness: yfinance data can be delayed or incorrect. Always verify critical numbers in SEC filings before acting.

Stock Deep-Dive

Select a stock to see all analysis in one view

Pick any shortlisted company to see its rubric scores, scenario model output, risk metrics, Monte Carlo distribution, and adversarial review combined into a single page. This is the per-company equivalent of the full pipeline above.
